

Pediatric Otolaryngology

From newborns through adolescence, you will find that we provide the gentle and specialized ear, nose and throat care your child needs. Our surgeons have trained at some of the top children's hospitals in the country and include members who have completed specialized fellowship training in pediatric otolaryngology. We focus on the medical and surgical management of pediatric obstructive sleep apnea, chronic ear infections, tonsillitis and sinusitis, as well as less common problems with hearing loss and head and neck masses. We also are equipped to perform office-based evaluations of the pediatric airway and voice.

Procedures & Services Commonly Utilized in Care for Pediatric Patients:
